## ACBD6 Polyclonal Antibody

Description

| Product type | Primary Antibody |
| :--- | :--- |
| Code | BT-AP00146 |
| Host | Rabbit |
| Isotype | IgG |
| Size | $20 \mathrm{ul}, 50 \mathrm{ul}, 100 \mathrm{ul}$ |
| Immunogen | The antiserum was produced against synthesized peptide derived from human ACBD6. AA range:121-170 |
| Mol wt | 31151 |
| Species reactivity | Human, Mouse, Rat |
| Clonality | Polyclonal |
| Recommended application | WB, IHC-p, ELISA |
| Concentration | $1 \mathrm{mg} / \mathrm{ml}$ |
| Full name | ACBD6 Antibody |
| Synonyms | ACBD6; Acyl-CoA-binding domain-containing protein 6 |

This product is for research use only, not for use in human, therapeutic or diagnostic procedure.

## Background

Human acyl-coenzyme A binding domain-containing member 6 (ACBD6) is a modular protein that carries an acyl-CoA binding domain at its N terminus and two ankyrin motifs at its C terminus. In mammals, there are six members of the acyl-CoA binding domain-containing (ACBD) family, and their annotation is not uniform. ACBD6 is not a ubiquitous protein, but it is expressed in hematopoietic tissues and appears to be restricted to primitive stem cells present in those tissues with functions in blood and vessel development. ACBD6 was detected in bone marrow, spleen, placenta, cord blood, circulating CD34+ progenitors, and embryonic-like stem cells derived from placenta. In placenta, the protein was only detected in CD34+ progenitor cells present in blood and in CD31+ endothelial cells surrounding the blood vessels. These cells were also positive for the marker CD133, and they probably constitute hemangiogenic stem cells, precursors of both blood and vessels. We propose that human ACBD6 represents a cellular marker for primitive progenitor cells with functions in hematopoiesis and vascular endothelium development.

## Recommended Dilution

WB: 1: 500-1: 2000
IHC: 1: 100-1:300
ELISA: 1: 10000
Not yet tested in other applications.

## Storage

$-20^{\circ} \mathrm{C}$ for one year
