

CD42b Polyclonal Antibody

Description

Product type Primary Antibody

Code BT-AP01501

Host Rabbit

Isotype IgG

Size 20ul, 50ul, 100ul

Immunogen The antiserum was produced against synthesized peptide derived from the Internal region of human

GP1BA. AA range:271-320

Mol wt 68860

Species reactivity Human

Clonality Polyclonal

Recommended application WB, IHC-p, ELISA

Concentration 1 mg/ml

Full name CD42b Antibody

Synonyms GP1BA; Platelet glycoprotein Ib alpha chain; GP-Ib alpha; GPIb-alpha; GPIbA; Glycoprotein Ibalpha;

Antigen CD42b-alpha; CD42b

This product is for research use only, not for use in human, therapeutic or diagnostic procedure.

Background

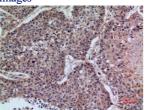

Glycoprotein Ib (GP Ib) is a platelet surface membrane glycoprotein composed of a heterodimer, an alpha chain and a beta chain, that is linked by disulfide bonds. The Gp Ib functions as a receptor for von Willebrand factor (VWF). The complete receptor complex includes noncovalent association of the alpha and beta subunits with platelet glycoprotein IX and platelet glycoprotein V. The binding of the GP Ib-IX-V complex to VWF facilitates initial platelet adhesion to vascular subendothelium after vascular injury, and also initiates signaling events within the platelet that lead to enhanced platelet activation, thrombosis, and hemostasis. This gene encodes the alpha subunit. Mutations in this gene result in Bernard-Soulier syndromes and platelet-type von Willebrand disease. The coding region of this gene is known to contain a polymophic variable number tandem repeat (VNTR) domain that is associated with susceptibility to nonarteritic anterior ischemic optic neuropathy. [provided by RefSeq, Oct 2013]GP1BA (Glycoprotein Ib Platelet Alpha Subunit) is a Protein Coding gene. Diseases associated with GP1BA include von willebrand disease, platelet-type and bernard-soulier syndrome, type a2. Among its related pathways are Platelet activation, signaling and aggregation and Formation of Fibrin Clot (Clotting Cascade). Gene Ontology (GO) annotations related to this gene include thrombin receptor activity. GP-Ib, a surface membrane protein of platelets, participates in the formation of platelet plugs by binding to the A1 domain of vWF, which is already bound to the subendothelium.

Recommended Dilution

WB: 1: 500 - 1: 2000 IHC-p: 1: 100 - 1: 300 ELISA: 1: 20000

Not yet tested in other applications.

Images

Immunohistochemical analysis of paraffin-embedded human-lung, antibody was diluted at 1:100

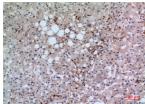

Western blot analysis of lysate from HeLa cells, using GP1BA Antibody.

Western Blot analysis of HeLa cells using CD42b Polyclonal Antibody. Secondary antibody was diluted at 1:20000
