Background

CSGALNACT2 (chondroitin sulfate N-acetylgalactosaminyltransferase 2) encodes a member of the chondroitin N-acetylgalactosaminyltransferase family. The encoded protein is involved in elongation during chondroitin sulfate synthesis. Alternative splicing of this gene results in multiple transcript variants. Two related pseudogenes have been identified on chromosome X.

IHC: 1: 100 - 1: 300

ELISA: 1: 40000

Not yet tested in other applications.
