Background

This gene encodes a Golgi stack membrane protein that is involved in the creation of a precursor of the H antigen| which is required for the final step in the synthesis of soluble A and B antigens. This is one of two genes encoding the galactoside 2-L-fucosyltransferase enzyme. Mutations in this gene are a cause of the H-Bombay blood group.

Recommended Dilution

WB: 1: 500 - 1: 2000

Not yet tested in other applications.
