Background

Expression of this gene is affected by vitamin A. The encoded protein of this gene may be associated with the cytoskeleton. A similar protein in rats may play a role in the regulation of cell differentiation. The rat protein binds and inhibits the cell membrane glutamate transporter EAAC1. The expression of the rat gene is upregulated by retinoic acid| which results in a specific reduction in EAAC1-mediated glutamate transport.

Recommended Dilution

WB: 1: 500 - 1: 2000
