Background

This gene encodes a member of the sorting nexin family. Members of this family contain a phox (PX) domain| which is a phosphoinositide binding domain| and are involved in intracellular trafficking. This protein does not contain a coiled coil region like some family members| and its exact function is unknown. Alternative splicing results in multiple transcript variants. A related pseudogene has been identified on chromosome 11.

Recommended Dilution

WB: 1: 500 - 1: 2000

Not yet tested in other applications.
