This product is for research use only, not for use in human, therapeutic or diagnostic procedure.

Background

This gene encodes a member of a superfamily of divalent cation-dependent phosphodiesterases. The encoded protein associates with CD40| tumor necrosis factor (TNF) receptor-75 and TNF receptor associated factors (TRAFs)| and inhibits nuclear factor-kappa-B activation. This protein has sequence and structural similarities with APE1 endonuclease| which is involved in both DNA repair and the activation of transcription factors.

Recommended Dilution

WB: 1: 500 - 1: 2000

Not yet tested in other applications.
