Background

The protein encoded by this gene is a transcription factor that includes several Kruppel-like zinc fingers in its C-terminal region. It possesses both activation and repression domains| and it can therefore have both positive and negative effects on the transcription of target genes. This gene has an intronless coding region| and it appears to have arisen by retrotransposition of the related YY1 transcription factor gene| which is located on chromosome 14.

Recommended Dilution

WB: 1: 500 - 1: 2000
