Background

MINPP1 encodes multiple inositol polyphosphate phosphatase; an enzyme that removes 3-phosphate from inositol phosphate substrates. Multiple inositol polyphosphate phosphatase 1 is the only enzyme known to hydrolyze inositol pentakisphosphate and inositol hexakisphosphate. Multiple inositol polyphosphate phosphatase 1 also converts 2,3 bisphosphoglycerate (2,3-BPG) to 2-phosphoglycerate; an activity formerly thought to be exclusive to 2,3-BPG synthase/2-phosphatase (BPGM) in the Rapoport-Luebering shunt of the glycolytic pathway.
