Background

SLK (STE20 Like Kinase) is a Protein Coding gene. Diseases associated with SLK include amyotrophic lateral sclerosis 9. Among its related pathways are Oocyte meiosis and Mitotic Roles of Polo Like Kinases. Gene Ontology (GO) annotations related to this gene include protein homodimerization activity and transferase activity, transferring phosphorus-containing groups. An important paralog of this gene is MAP4K3. Mediates apoptosis and actin stress fiber dissolution.
