Background

This gene belongs to the neuron navigator family and is expressed predominantly in the nervous system. The encoded protein contains coiledcoil domains and a conserved AAA domain characteristic for ATPases associated with a variety of cellular activities. This gene is similar to unc-53, a Caenorhabditis elegans gene involved in axon guidance. Multiple alternatively spliced transcript variants for this gene have been described but only one has had its full-length nature determined.

Recommended Dilution

IHC-p: 1: 50 - 1: 300 Not yet tested in other applications.
