

PKCdelta(Phospho-Thr505) Rabbit Polyclonal Antibody

Description

Product type	Primary Antibody
Code	BT-AP11963
Host	Rabbit
Isotype	IgG
Size	100ul, 50ul, 20ul
Immunogen	Synthesized phospho peptide around human PKC δ (Thr505)
Mol wt	N/A
Species reactivity	Human, Mouse, Rat
Clonality	Polyclonal
Recommended application	WB
Concentration	1 mg/ml
Full name	PKC delta
Synonyms	PKC δ ;Thr505 ; Protein kinase C delta type; EC 2.7.11.13; Tyrosine-protein kinase PRKCD; EC 2.7.10.2; nPKC-delta

This product is for research use only, not for use in human, therapeutic or diagnostic procedure.

Background

Protein kinase C (PKC) is a family of serine- and threonine-specific protein kinases that can be activated by calcium and the second messenger diacylglycerol. PKC family members phosphorylate a wide variety of protein targets and are known to be involved in diverse cellular signaling pathways. PKC family members also serve as major receptors for phorbol esters| a class of tumor promoters. Each member of the PKC family has a specific expression profile and is believed to play distinct roles in cells. The protein encoded by this gene is one of the PKC family members. Studies both in human and mice demonstrate that this kinase is involved in B cell signaling and in the regulation of growth| apoptosis| and differentiation of a variety of cell types. Alternatively spliced transcript variants encoding the same protein have been observed.

Recommended Dilution

WB: 1: 1000 - 1: 2000

Not yet tested in other applications.
