

TR beta 1(Phospho Ser142) Polyclonal Antibody

Description

Product type Primary Antibody

Code BT-AP15200

Host Rabbit

Isotype IgG

Size 20ul, 50ul, 100ul

Immunogen The antiserum was produced against synthesized peptide derived from human TR-beta1 around the

phosphorylation site of Ser142. AA range:116-165

Mol wt 52788

Species reactivity Human, Mouse, Rat

Clonality Polyclonal

Recommended application WB, ELISA

Concentration 1 mg/ml

Full name Thyroid hormone receptor beta

Synonyms Thyroid hormone receptor beta; THRB; ERBA2; NR1A2; THR1; Thyroid hormone receptor beta; Nuclear

receptor subfamily 1 group A member 2; c-erbA-2; c-erbA-beta

This product is for research use only, not for use in human, therapeutic or diagnostic procedure.

Background

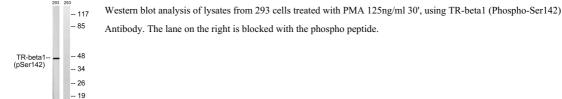

The protein encoded by this gene is a nuclear hormone receptor for triiodothyronine. It is one of the several receptors for thyroid hormone, and has been shown to mediate the biological activities of thyroid hormone. Knockout studies in mice suggest that the different receptors, while having certain extent of redundancy, may mediate different functions of thyroid hormone. Mutations in this gene are known to be a cause of generalized thyroid hormone resistance (GTHR), a syndrome characterized by goiter and high levels of circulating thyroid hormone (T3-T4), with normal or slightly elevated thyroid stimulating hormone (TSH). Several alternatively spliced transcript variants encoding the same protein have been observed for this gene.

Recommended Dilution

WB: 1: 500 - 1: 2000 ELISA: 1: 5000

Not yet tested in other applications.
