

## Histone H3 Monoclonal Antibody(Mix)

Description

Product type	Primary Antibody
Code	BT-MCA0713
Host	Mouse
Isotype	IgG
Size	20ul, 50ul, 100ul
Immunogen	Recombinant Protein of Histone H3
Mol wt	15273
Species reactivity	Human,Mouse,Rat
Clonality	Monoclonal
Clonality Recommended application	Monoclonal WB
2	
Recommended application	WB
Recommended application Concentration	WB 1 mg/ml

This product is for research use only, not for use in human, therapeutic or diagnostic procedure.

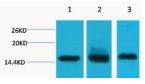

## Background

Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. This structure consists of approximately 146 bp of DNA wrapped around a nucleosome, an octamer composed of pairs of each of the four core histones (H2A, H2B, H3, and H4). The chromatin fiber is further compacted through the interaction of a linker histone, H1, with the DNA between the nucleosomes to form higher order chromatin structures. This gene is intronless and encodes a replication-dependent histone that is a member of the histone H3 family. Transcripts from this gene lack polyA tails| instead, they contain a palindromic termination element. This gene is found in the large histone gene cluster on chromosome 6p22-p21.3.

## **Recommended Dilution**

WB: 1:1000-3000 Not yet tested in other applications.

Images

Western blot analysis of 1) Hela, 2) Raw 264.7, 3) Rat Testis tissue diluted at 1:1000.

Storage -20°C for one year
